Individual Description
- Project 3
CS691 - Machine Learning Course

Dzung Bui

In this project, I did:

1. unique_classes(y)

2. predict(model, x)

3. build_model(X, y, nn_hdim, num_passes=20000, print_loss=False)

I also wrote the write-up for my functions.

For my groupmate - Nasif Zaman, he has done:

- calculate_loss(model, X, y)

- back_prop(model, X, y, eta)

- recast(y)

and the write up for his code.
